

COVID 19 DOUBLING OF CASES

The doubling of cases observed the past three days deserves special attention. Though our PHC Covid19 Census is less significant in number, there is a notable increase in our Census from three on December 27 to six patients with Covid19 recorded today.

It is quite sobering to report that today's mortality included a 10 month old infant with a Congenital Heart Disease, Tetralogy of Fallot, who presented with diarrhea and succumbed to severe infection as a complication of Covid19. As the DOH advised, let us not belittle mild symptoms or treat gastrointestinal symptoms as just another stomach virus. SARSCOV2 is still very much around and not to be taken lightly. May we all BE ON GUARD and KEEP SAFE.

LET'S NOT MAKE 2022, "2020 TOO"

30 December 2021

With newly-reported cases doubling the past two days, the DOH enjoins everyone to do what is within our power to avoid making year 2022 another version of 2020. **Let us act with utmost vigilance as if the highly transmissible omicron variant is already here.**

The DOH also calls on everyone, whether vaccinated or boosted to reassess their plans for New Year celebration. Safest option will be to stay in your family bubble and avoid gatherings outside of your bubble. If you will still prefer to **MEET, then DON'T EAT** together so you can safely keep your masks on while enjoying the company of family and friends outside of your bubble.

Finally, do not **DISCOUNT** any mild symptoms. Immediately isolate, get tested and stay in isolation for 10 days. Notify your close contacts and ask them to quarantine for 7 days if fully vaccinated or 14 days if not vaccinated.
